Authorization for this examiner's amendment was given in a telephone interview with Sylvia Tan on September 16, 2004.

Claim 2 was rewritten as follows:

--Claim 2: A method of measuring a blood component in a control serum using a dry analytical process comprising the steps of: applying a control serum to a dry analytical element containing reagents for reacting with the blood component, and measuring the reaction between the reagents and the blood component, wherein said control serum is prepared from fibrin-free or fibrin-removed serum without performing dialysis, followed by freezing or freeze-drying, and further wherein said blood component is selected from the group consisting of blood urea nitrogen, uric acid, total cholesterol, creatinine, albumin, high density lipoprotein cholesterol, magnesium, alkaline phosphatase, and creatine kinase subunit MB. –

2. The following is an examiner's statement of reasons for allowance: Application serial no. 10/659,928 is being allowed since none of the prior art of record teaches or fairly suggests a method for measuring a blood component in a control serum using a dry analytical process, wherein the control serum is prepared from a serum from which fibrin has been removed but which has not been subjected to dialysis, followed by freezing or freeze-drying.
